RST Threat Library

RST Report Hub

Automated Threat Report Processing

- ▸▸ **Hassle-free subscription to all reports via API**
- ▸▸ **2000+ Threat Reports per Year**
- ▸▸ **6000+ Malware and Tools**
- ▸▸ **1000+ Intrusion Sets (threat actors)**
- ▸▸ **TTPs, IOCs, threat data and more available in STIX or JSON formats**
- ▸▸ **out-of-box integrations with TIP**

Ideal For:

- **CTI Analysts**
- **SOC teams**
- **DFIR specialists**
- **Threat Hunters**
- **CISO/CTOs**

Transforming Human-Readable Public Threat Reports into Actionable Structured Intelligence in machine readable-formats

Stop spending countless hours manually processing threat reports, articles, and blogs. RST Report Hub delivers an advanced, automated approach that dramatically accelerates public threat research analysis through the combined power of intelligent workflows and AI.

We continuously aggregate thousands of threat reports from around the globe. Each report is transformed into a concise summary with essential technical metadata, including TTPs, CVEs, IoCs, threat actors, malware, tools, countries, sectors, and more, with relationships between objects presented in STIX 2.1 or a custom JSON format. This is designed to save you valuable time and keep you well-informed.

Enhanced with RST Threat Library - a continuously updated knowledge base of adversary profiles, campaigns, malware families, and tools with their aliases across multiple vendor taxonomies – this solution serves as a comprehensive dataset for CTI analysis.

Key benefits:

- ▸▸ Accelerates collection and analysis of public threat reports with automation
- ▸▸ Ensures consistency and reduces human effort
- ▸▸ Enriches findings with structured intelligence from RST Threat Library
- ▸▸ Unifies threat naming across different conventions
- ▸▸ Supports faster threat detection and decision-making
- ▸▸ Supports threat hunters with quick access to relevant threat intelligence information
